SUBJECT: News Release – New Product Lines Launched at Fin-X Expo

For Immediate Release –

Galaxy Associates Has Introduced Two New Product Lines Aimed at Traditionally Difficult Areas

Galaxy Associates, Inc., a Cincinnati-based supplier of specialty chemical products to a variety of industries, is pleased to announce the availability of two new extraordinary technologies:

A line of Neutral pH Cleaners™ for ferrous and nonferrous pretreatment. These products contain a unique surfactant formulation without caustic or acid yielding outstanding performance to lift and remove even greasy soils with all of the advantages of operating at a near neutral pH. Benefits include reduced temperature energy savings, very low VOC's, scale elimination in wash tanks and equipment and excellent worker acceptance. The products are GX Clean 5180, 5185, 5187 and 5189.

A new series of Lazr-X™ products for the efficient removal of laser scale. Removal of the black glassy oxide resulting from laser cutting is essential as coatings do not adhere well to this surface. Galaxy now offers a family of state of the art mineral acid products for solving this difficult process. The products are low foaming, quick acting, produce less sludge and offer good detergency as well as excellent flash rust control. The products are Galaxy Lazr-X 82, 84 and 86.

Further information is available through Galaxy's National Sales and Service force by contacting us at 800-661-9443.
