

Galaxy Associates, Inc. Expands with the Addition of: The “**GX Series**” of Metalworking Fluids

Cincinnati, Ohio, June 2006 – Galaxy Associates, Inc. of Cincinnati, Ohio, provides high quality fluid products and services to manufacturers who are looking to optimize their operating processes with immediate and measurable improvements. Galaxy Associates has announced a new line of products, the “**GX Series**”, targeting solutions for the metalworking industry.

Galaxy Associates has specialized in products designed to address the needs of many industries, including: industrial, automotive, pulp and paper and transportation. Each sector has its specific requirements and needs. Galaxy has designed its services and products to meet these needs. The result of the Galaxy Associates experience is increased performance, through; rapid order-fill responses, excellent on-site servicing, technical support and optimum performance products. Galaxy will now provide the same excellent products and services for the metalworking industry, with the addition of the “**GX Series**”.

The new “**GX Series**” will include synthetic, semi-synthetic, soluble oils, stamping, drawing, and forming fluids as well as machine cleaners.

- The ***GX line of synthetic*** products will improve both machining and grinding applications within operations without using mineral oil, for a clear, clean, low-foaming fluid. These qualities provide significant advantages in your machine and product quality.

- The ***GX line of semi-synthetic*** products includes a broad range of general machining and grinding fluids, which are suggested general purpose and medium to heavy-duty operations. This product family is especially useful in applications that require long fluid life and cleanliness.
- The ***GX line of soluble oil*** products is designed for heavy-duty machining and grinding on both ferrous and non-ferrous metals, providing long fluid life, corrosion protection, high lubricity, low foaming characteristics and excellent rancidity control. This series is designed to save money on storage, handling, mixing, charging, make-up and maintenance costs. In addition, GX soluble oils can be blended with additives to provide for enhanced machining and grinding performance capabilities in the most difficult applications.

“The addition of the **“GX Series”** allows Galaxy to round out our fluid offerings in the industries we presently serve, but including now, the metalworking industry. The **“GX Series”** are quality fluids that will rapidly become a very vital sector of our strategic business and a mainstay of our product offerings.” states Don Miller, General Sales Manager. “We are certain that the **“GX line”** will be one more reason for clients to come to Galaxy for their overall fluid solutions.”

Galaxy Associates, Inc., headquartered in Cincinnati, OH, was founded in April 2002 by the former owner and CEO of Texo Corporation, Mel Fisher. Galaxy provides specialty, custom blended chemical products, services, and technical support to the industrial market, and specializes in cleaners, phosphates and sealers for the Metal Finishing Industry and specialty chemistries for the Pulp & Paper Market. Galaxy acquired the general industrial division of Minneapolis, Minnesota based Fremont Industries, Inc. in April 2004. Galaxy also has an Automotive Division and a Transportation Division. These divisions focus respectively, on automotive and transportation customers. Galaxy continues to service and support customers throughout North America. The new offering of metalworking fluids will help us bring additional value to our existing customers and allow us to broaden our scope of customers in the area that we currently serve.

Galaxy Associates, located in Cincinnati Ohio, offers efficient, high-quality products and services that have been created for customers who want to optimize their operating processes with immediate and measurable improvements. Visit www.Galaxy-Associates.com
